

## New and Improved Equipment for the Job Site

[www.southeast.construction.com](http://www.southeast.construction.com)

**Two Mustang skid-steer loaders receive numerous upgrades, while a new concrete pump offers versatility and more productivity to many concrete projects.**

**Schwing America's KVM 39X**, a new truck-mounted concrete pump with Generation 2 detachable boom offers lighter picking weight and faster mounting for more productivity on projects requiring a separate placing boom. The key to the Generation 2 concept is the separate powerpack/ reservoir which is flown to the mounting point independently of the boom. This allows a 13,200 lb. picking weight for the 114-ft. boom which can be mounted in many ways. When on highrise work and utilizing a self-climbing form system, the tubular mast can be attached to the forming system, or a zero-elevation frame can be clamped to the working deck of the forms. For more information, visit [www.schwing.com](http://www.schwing.com).

**Mustang Manufacturing Co., Inc.** is introducing two upgraded models to its skid-steer loader product. Models 2044 and 2054 have received various enhancements designed to improve operator comfort and visibility. A re-engineered OPS/FOPS enclosure on the two models is the most visible change to these new skid-steers. In addition

to a new look, the re-engineered cab enclosure includes a larger rear window and a redesigned side screen, providing enhanced panoramic views of the job site. Visibility is also enhanced by new exterior, halogen lighting. The Mustang Dual Lever/Hand controls option has also been enhanced, now requiring much as 18 percent less hand control efforts from the operator. The 2044 and 2054 have two additional control options: dual lever with foot controls and T-bar with foot controls. An improved heating system now offers higher air flow and more vents, creating a warmer cab in less time. The heater has also been relocated to the left side of the ROPS enclosure, making entry/exit to the machine easier. A new acoustical sound package option will provide for even quieter sound levels. For more information about Mustang, visit [www.mustangmfg.com](http://www.mustangmfg.com).

**The Wolverine E-Spray System** is a self-contained spray system that is designed to fit on the open bed of a HMMWV Model A2 Series Heavy Mobile Multi-Purpose Wheeled Vehicle that is used in military operations, or it can be customized to fit commercial vehicles. Efficiently dispensing Midwest Industrial's environmentally safe dust and soil control products, such as Soil-Sement®, EnviroKleen® and EK35®, the Wolverine E-Spray System is equipped with a chemical holding tank, tool box, diesel engine-driven pump, mechanical and electrical controls and spraying equipment. The one-person operated, easy-to-use device is designed to be mobile and versatile with either a spray bar or spray wand. The Wolverine E-Spray System's holding tank holds up to 550 gallons and has recirculation and agitation. For more information, contact Midwest Industrial Supply at [www.midwestind.com](http://www.midwestind.com) or toll free (800) 321-0699. <<
